Kaltura video tools

Kaltura is a video streaming platform that can be used for media resources that you select or create for your courses. There are two primary places to create or upload your media:

- Mediaspace @ WCSU
  https://media.wcsu.edu/
- Blackboard Learn (using Kaltura tools)
  https://wcsu.blackboard.com/

Mediaspace is a YouTube-like portal where you can add content to your own channel, or locate materials that WCSU has available in its media collections. You can provide a link for your students to media in the collection. Students will be able to login using their Western username and password to view the content anytime and anywhere with an Internet connection.

Blackboard Learn is the online learning environment for WCSU courses. All courses have a Blackboard shell with enrolled students. Kaltura tools are fully integrated into Blackboard. Kaltura can be used to record or upload video for student viewing, including webcam, audio, and screen capture (for example, narrated PowerPoint presentations). It can also be used with the Blackboard Assignment tool (enabling students to record and upload video-based work), and with Blackboard discussion forums.

With Kaltura you can record and post video without the need for specialized knowledge or software. It offers recording from your computer, basic editing tools and one-click publishing so that you can get your video to your students quickly and easily.
